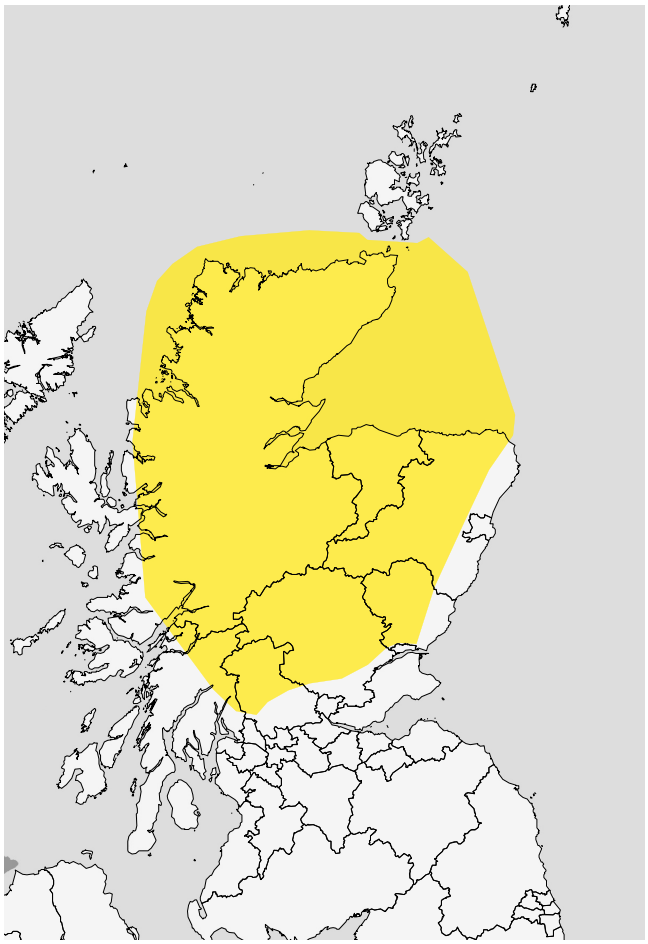
Yellow warning
Snow & Ice

Between
18:00 Mon 26 Dec 2022 and
15:00 Tue 27 Dec 2022



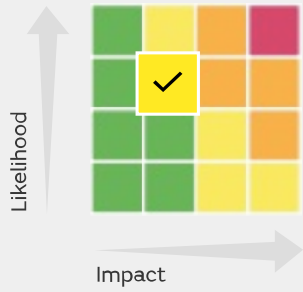
Travel disruption is possible from wintry showers leading to patchy ice tonight, followed by snow during Tuesday, mainly on higher routes.

What to expect

- Some roads and railways likely to be affected by snow, resulting in longer journey times by car, bus and train
- Probably some icy patches on some untreated roads, pavements and cycle paths, leading to an increased chance of injuries and accidents

Further details

Wintry showers will continue through this evening, gradually fading overnight into the early hours of Tuesday morning. Accumulating snow will be focused across Highland and Grampian overnight with a further 1-4 cm likely in places above around 150 metres, although patchy snow could accumulate at low levels especially in the far north. The main hazard, however, looks like being ice developing on untreated surfaces. Then through Tuesday morning, a spell of snow is expected to move northeast, but gradually turning to rain at low levels through the afternoon. 1-4 cm of snow could fall above around 100 metres, before a thaw commences, but larger accumulations of 5-10 cm seem likely on ground above around 250 metres.



Medium likelihood of low impacts

Issued at 09:37 Mon 26 Dec, 2022
